

Q No	Question	To pic	Fig ure	Q Type	Mar ks	Answer
1	A Java program cannot directly communicate with an ODBC driver because	4	N	R	1	ODBC written in C language
2	A JDBC technology -based driver ("JDBC driver") makes it possible to do ?	4	N	R	1	All mentioned above
3	Abbreviate the term DSN	4	N	R	1	Data Source Name
4	An API can be created for	4	N	R	1	All of these
5	API stands for	4	N	R	1	application program interface
6	API which controls access to the row result of a given Statement and holds data retrieved from a database after you execute an SQL query using Statement objects.	4	N	R	1	java.sql.ResultSet
7	Application Server used in _____	4	N	R	1	Three-Tier Mode
8	Backbone of JDBC Architecture is _____	4	N	R	1	Driver Manager
9	boolean isLast() method defines _____	4	N	R	1	Determines whether the ResultSet cursor points to the last row of the I
10	Callable Staement used to -----	4	N	R	1	calling procedure
11	Callable statement object in JDBC is used to execute a call to	4	N	R	1	stored procedure
12	CallableStatement is used to execute _____	4	N	R	1	Stored Procedures
13	Choose the correct syntax for getConnection() method	4	N	R	1	public static Connection getConnection(String url, String name, String p SQLException
14	Class.forName(" _____ ")	4	N	R	1	sun.jdbc.odbc.JdbcOdbcDriver
15	class.forName() method throws	4	N	R	1	ClassNotFoundException
16	Connection object can be initialized using the _____ method of the DriverManager Class.	4	N	R	1	getConnection()
17	createStatement() method without any parameter is used to create a statement with _____	4	N	R	1	a forward only and read only ResultSet
18	Database meta data are retrieved through _____.	4	N	R	1	a PreparedStatement object
19	DELETE statement of an SQL is executed by _____.	4	N	R	1	executeUpdate()
20	DriverManager.getConnection(_____, _____, _____) What are the two parameters that are included ?	4	N	R	1	URL or machine name where server runs, User ID, Password
21	DSN stands for	4	N	R	1	Data Source Name
22	Every driver must provide a class that should implement the _____	4	N	R	1	Driver interface
23	execution of delete SQL query in JDBC, ..... method must be used.	4	N	R	1	executeUpdate()
24	Following is return type of executeUpdate( ):	4	N	R	1	int
25	For execution of INSERT SQL query in JDBC, ..... method must be used.	4	N	R	1	executeUpdate()
26	For execution of SELECT SQL query in JDBC, _____ method must be used.	4	N	R	1	executeQuery()

27	forName is a _____ type method	4	N	R	1	static
28	getConnection() method of which class	4	N	R	1	DriverManager
29	getUserName() method is used to _____	4	N	R	1	retrieve name of user
30	How can you execute DML statements (i.e. insert, delete, update) in the database?	4	N	R	1	By invoking the executeUpdate(...) method of a Statement object
31	How can you retrieve information from a ResultSet?	4	N	R	1	By invoking the special getter methods on the ResultSet: getString(...), getInt(...)
32	How many JDBC driver types are available by sun Microsystem?	4	N	R	1	Four
33	How many steps are used to connect any java application with the database using JDBC?	4	N	R	1	5
34	How many transaction isolation levels are defined in java.sql.Connection interface	4	N	R	1	5
35	If a PreparedStatement is a SQL SELECT statement, you execute the statement using _____.	4	N	R	1	PreparedStatement.executeQuery();
36	If you need to use a stored procedure with output parameters, which of the following statement type should be used to call the procedure?	4	N	R	1	CallableStatement
37	In 2-tier architecture , the first tier is generally _____	4	N	R	1	GUI
38	In JDBC _____ imports all java classes concerned with database connectivity.	4	N	R	1	java.sql.*
39	In the following JDBC drivers which is known as partly java driver?	4	N	R	1	Native-API driver
40	In the three tier model the middle tier of the services acts as a mediator between _____ and _____.	4	N	R	1	Java application and databases
41	In which model java application or applet supports for database access?	4	N	R	1	both a and b
42	In which type of driver must Odbc drivers be loaded on client machine?	4	N	R	1	Type 1
43	Invoking Class.forName() method may throw _____.	4	N	R	1	ClassNotFoundException
44	JDBC is a ----- interface, which means that it is used to invoke SQL commands directly.	4	N	R	1	low level
45	JDBC Stands for	4	N	R	1	Java Datbase Connectivity
46	JDBC stands for:	4	N	R	1	Java Database Connectivity
47	JDBC-ODBC bridge product provide _____ access via _____.	4	N	R	1	JDBC driver, ODBC drivers
48	Methods of ResultSet() throws _____	4	N	R	1	SQLException
49	Microsoft access stores data in a _____ file format	4	N	R	1	.MDB
50	Name the type number belongs to JDBC ODBC Bridge driver?	4	N	R	1	Type 1
51	Native API converts _____ into the _____ used by DBMS.	4	N	R	1	JDBC API, Native API calls
52	Native – protocol pure Java converts ..... in to the ..... used by DBMSs directly.	4	N	R	1	JDBC calls, network protocol
53	ODBC Drivers are platform _____	4	N	R	1	Dependent
54	ODBC is not appropriate for direct use from java because it uses a .....	4	N	R	1	C interface
55	ODBC minimum SQL grammar contains	4	N	R	1	INSERT, UPDATE ,DELETE ONLY
56	ODBC requires configuring _____ which represents the target database.	4	N	R	1	Data Source Name
57	ODBC stands for	4	N	R	1	open database connectivity
58	Prepared statement object in JDBC is used to execute _____ Queries	4	N	R	1	parameterized

59	PreparedStatement are used for calling _____	4	N	R	1	precompile Statement
60	prepareStatement method is from which class	4	N	R	1	Connection Class
61	return type of execute() method is	4	N	R	1	boolean
62	SQL stands for _____ .	4	N	R	1	Structured Query Language
63	Statement is _____.	4	N	R	1	interface
64	The JDBC –ODBC Bridge is _____	4	N	R	1	Multithreaded
65	The -----method executes a simple query and returns a single Result Set object	4	N	R	1	executeQuery()
66	The ..... object provides you with methods to access data from the table.	4	N	R	1	ResultSet
67	The ..... method sets the query parameters of the PreparedStatement Object.	4	N	R	1	setString()
68	The ..... object allows you to execute parameterized queries.	4	N	R	1	PreparedStatement
69	The ..... method executes an SQL statement that may return multiple results.	4	N	R	1	execute()
70	The ..... package contains classes that help in connecting to a database, sending SQL statements to the database, and processing the query results.	4	N	R	1	java.sql
71	The command to remove all the rows from a table 'CUSTOMER' is:	4	N	R	1	DELETE FROM CUSTOMER
72	The correct string for loading Jdbc-Odbc bridge driver using Class.forName() method is:	4	N	R	1	sun.jdbc.odbc.JdbcOdbcDriver
73	The First task in JDBC is _____ .	4	N	R	1	register a driver
74	The interface used to execute SQL stored procedures	4	N	R	1	CallableStatement
75	The JDBC API is an application interface of java for connection java as	4	N	R	1	Middle
76	The JDBC API is application interface connecting java as ____	4	N	R	1	Front End
77	The parameters of the PreparedStatement object are ..... when the user clicks on the Query button.	4	N	R	1	initialized
78	The PreparedStatement_____symbol is placeholder that is replaced by the input parameter at seen time.	4	N	R	1	?
79	The ResultSet _____provides methods for retrieving and manipulating the results of executed queries.	4	N	R	1	interface
80	The Type 3 architecture is _____	4	N	R	1	JDBC-Net pure Java
81	The valid constant to represent ResultSet type is _____	4	N	R	1	All of the mentioned
82	The _____ object provides you with methods to access data from the table.	4	N	R	1	ResultSet
83	The _____ package contains classes that help in connecting to a database, sending SQL statements to the database and processing the query results.	4	N	R	1	java.sql.*
84	The _____ interface Provides various methods for getting information about Database.	4	N	R	1	DatabaseMetaData
85	The _____driver resolves JDBC call and makes equivalent ODBC Call	4	N	R	1	JDBC-ODBC bridge
86	The_____ is the language for interacting with Database.	4	N	R	1	Structured Query Language(SQL)
87	To execute SQL query which method is used.	4	N	R	1	All of these
88	To retrieve a Connection object,..... Method is used.	4	N	R	1	getConnection( )
89	Type 1 driver is also known as	4	N	R	1	JDBC-ODBC Bridge Driver
90	Type 3 driver is also known as _____	4	N	R	1	JDBC-net Pure Java
91	Type II JDBC driver is also known as _____	4	N	R	1	Native API partly Java driver

92	Type IV JDBC driver is also known as _____	4	N	R	1	Native Protocol Pure-Java Driver
93	Type4 driver is also known as:	4	N	R	1	100% Pure Java
94	What is JDBC	4	N	R	1	Java API with databases
95	What maintains a cursor pointing to a particular row of data initially, cursor points to before the first row?	4	N	R	1	ResultSet interface
96	Where the object of ResultSet maintains a cursor?	4	N	R	1	First Row
97	Which among the below is not an interface of java.sql Package	4	N	R	1	ResultSetStatement
98	Which are the JDBC components?	4	N	R	1	All of the above
99	Which class is used to connect java application to JDBC driver	4	N	R	1	DriverManager
100	Which class/ interface is used for an SQL statement that is executed frequently?	4	N	R	1	PreparedStatement
101	Which driver provides JDBC API access via one or more ODBC drivers	4	N	R	1	JDBC-ODBC bridge driver
102	Which driver is called as a thin driver in JDBC?	4	N	R	1	Type-4 Driver
103	Which driver is efficient and always preferable for using JDBC applications?	4	N	R	1	Type-4
104	Which driver is needed to connect to Microsoft database?	4	N	R	1	JDBC-ODBC Bridge Driver
105	Which driver type use middleware server(Application Server)?	4	N	R	1	Type 3
106	which from the below use "middle-tier"	4	N	R	1	All of above
107	Which interface is important from java.sql package in JDBC?	4	N	R	1	Connection
108	Which Interface is used to execute dynamic SQL statements?	4	N	R	1	PreparedStatement
109	Which interface provides methods to execute queries with the database?	4	N	R	1	Statement interface
110	Which is default ResultSet type	4	N	R	1	TYPE_FORWARD_ONLY
111	Which is not a type of JDBC driver	4	N	R	1	JDBC-Native pure java
112	Which is the correct syntax of next( ) method of ResultSet?	4	N	R	1	boolean next( )
113	Which JDBC driver Type (s) can be used in either applet or servelt code?	4	N	R	1	Both Type 3 and Type 4
114	Which JDBC driver Type(s) can you use in a three-tier architecture and if the Web server and the DBMS are running on the same machine?	4	N	R	1	Both Type 3 and 4
115	Which JDBC driver Types are used for over communications networks?	4	N	R	1	Both Type 3 and Type 4
116	Which kind of driver convert JDBC calls into calls on the client API for Oracle, Sybase, Informix, IBM DB@ , or Other DBMS	4	N	R	1	Native-API partly-Java driver
117	Which method is used to obtain count of total rows of ResultSet	4	N	R	1	getRow
118	Which method is used to perform DML statements in JDBC?	4	N	R	1	executeUpdate()
119	Which method is used to send CREATE TABLE queries to database using JDBC?	4	N	R	1	executeUpdate()
120	Which method must be used to execute INSERT, UPDATE, or DELETE statement .	4	N	R	1	executeUpdate()
121	Which method of class is used to register & dynamically load the driver class?	4	N	R	1	forName()
122	Which of the following describes the correct sequence of the steps involved in making a connection with a database. 1. Loading the driver 2. Process the results. 3. Making the connection with the database. 4. Executing the SQL statements.	4	N	R	1	1,3,4,2
123	which of the following function is used to find the column count of the particular ResultSet ?	4	N	R	1	getColumnCount()
124	Which of the following invokes functions in sql ?	4	N	R	1	Callable statements

125	Which of the following is interfaces?	4	N	R	1	Statement
126	Which of the following is not valid method of DriverManager class?	4	N	R	1	createStatement()
127	Which of the following is the correct order of keywords for SQL SELECT statements?	4	N	R	1	SELECT, FROM, WHERE
128	Which of the following is used for sending SQL statements?	4	N	R	1	Statement
129	Which of the following method is method is used to load and register driver ?	4	N	R	1	Class.forName(&quot;sun.jdbc.odbc.JdbcOdbcDriver&quot;);
130	Which of the following methods are needed for loading a database driver in JDBC?	4	N	R	1	Both A and B
131	Which of the following model is java applet or application directly communicates with data source?	4	N	R	1	Two tier
132	Which of the following model is known as client/server configuration.	4	N	R	1	Two-tier
133	Which of the following package contains all JDBC API's those are required to make connection with database?	4	N	R	1	java.sql.*
134	Which of the following statement is a prepared statements ?	4	N	R	1	Insert into department values(?,?,?)
135	Which of the following statements loads the JDBC-ODBC driver?	4	N	R	1	Class.forName(&quot;sun.jdbc.odbc.JdbcOdbcDriver&quot;);
136	Which of the following translates the socket information in call format required by the DBMS.	4	N	R	1	Middleware Application Server
137	Which of the follling statement is false as far as different type of statements is concern in JDBC?	4	N	R	1	Interim statement
138	Which of these API represents that software programs can follow to communicate with each other?	4	N	R	1	Both A & B
139	Which one of the following will not get the data from the first column of ResultSet rs, returned from executing the following SQL statement: SELECT name, rank, serial_No FROM employee?	4	N	R	1	rs.getString(0)
140	Which package is necessary to import all java classes concerned with database connectivity?	4	N	R	1	java.sql.*
141	Which package need to be imported for establishing connection with database	4	N	R	1	java.sql
142	Which statement is static and synchronized in JDBC.	4	N	R	1	getConnection()
143	Which statements about JDBC are true?	4	N	R	1	Both II and III
144	Which type of driver provides JDBC access one or more ODBC drivers?	4	N	R	1	Type 1 driver
145	Which type of driver converts JDBC calls into the network protocol used by the database management system directly	4	N	R	1	Type 4 Driver
146	Which type of driver is unquie in JDBC?	4	N	R	1	JDBC-Native API
147	Which was first most widely used programming interface for accessing relational databases on almost all platforms ?	4	N	R	1	ODBC API
148	Why do we need the JDBC API?	4	N	R	1	All of the above
149	You can add a row using SQL in a database with which of the following?	4	N	R	1	INSERT
150	_____ calls get converted into native C or C++ API calls.	4	N	R	1	JDBC Native API
151	_____ is an interface by which application programs can access and process SQL databases in a DBMS-independent manner.	4	N	R	1	ODBC
152	_____ Interface is important from java.sql package in JDBC	4	N	R	1	Connection
153	_____ interface is used to know the capabilities or information about a database Management system DBMS with JDBC Driver.	4	N	R	1	Database Metadata
154	_____ method of Connection interface is used to create statement	4	N	R	1	createStatement()
155	_____ method of DriverManager class is used to create connection with database.	4	N	R	1	getConnection()

156	_____ interface allows storing results of query?	4	N	R	1	ResultSet
157	_____ is a table of data which represents a data from database	4	N	R	1	ResultSet
158	_____ interface represents the comprehensive information about the database package.	4	N	R	1	DatabaseMetaData
159	What is data in following program: import java.sql.*; public class Selectdbase { public static void main(String args[]) { try { Class.forName("sun.jdbc.odbc.JdbcOdbcDriver"); Connection con=DriverManager.getConnection("jdbc:odbc:data"); Statement st=con.createStatement(); ResultSet rs=st.executeQuery("select * from emp"); while(rs.next()) { System.out.println("id:"+rs.getInt("id")); System.out.println("salary:"+rs.getString("salary")); System.out.println("name:"+rs.getString("name1")); } con.close(); } catch(SQLException e) {} catch(Exception e) {} } }	4	N	A	2	data source name
160	'?' symbol is used for _____	4	N	U	2	parameter in prepared statement
161	.Find out error from following code. import java.sql.*; public class Updatedbase { public static void main(String args[]) { try { Class.forName("sun.jdbc.odbc.JdbcOdbcDriver"); Connection con=DriverManager.getConnection("jdbc:odbc:data2"); Statement st=con.createStatement(); resultSet rs=st.executeQuery("select * from college"); while(rs.next()) { System.out.println("id:"+rs.getInt("id")) System.out.println("name1:"+rs.getString("name1")); } con.close(); } catch(SQLException e) {} catch(Exception e) {} } }	4	N	A	2	; missing
162	1. Choose the correct option to establish a connection to database named student and display its contents.	4	N	A	2	import java.sql.*; class OracleCon{ public static void main(String args[]) try{ Class.forName("oracle.jdbc.JdbcOdbcDriver"); Connect con=DriverManager.getConnection("jdbc:oracle:thin:@localhost:1521:xe","","system"); Statement stmt=con.createStatement(); ResultSet rs=stmt.executeQuery from student"); while(rs.next()) System.out.println(rs.getInt(1)+& ""+rs.getString(2)+&quot; &quot;+rs.getString(3)); con.close(); } } System.out.println(e); } }
163	A benefit of the three-tier architecture is which of the following?	4	N	U	2	New modules can be built to support specific business needs.
164	afterLast() method returns.....	4	N	U	2	Moves cursor to the end of resultset that is after last row
165	All raw data types including binary documents or images should be read and uploaded to the database as an array of ....	4	N	U	2	byte
166	Analyse the following code and fill the appropriate statement in the blanks import java.sql.*; class DB { public static void main(String args[])throws Exception { Class.forName("sun.jdbc.odbc.JdbcOdbcDriver"); Connection con=DriverManager.getConnection("jdbc:odbc:mydsn"); Statement stmt=con.createStatement(); ResultSet rs=stmt._____("select * from emp where id=101"); System.out.println("EmpName\tDesignation\tSalary"); while(rs.next()) { System.out.println(rs.getString(2)+"\t"+rs.getString(3)+"\t"+rs.getInt(4)); } con.close(); } }	4	N	A	2	executeQuery()
167	Analyse the following code and find errors. import java.sql.*; class DisplayRecord { public static void main(String args[])throws Exception { Class.forName("sun.jdbc.odbc.JdbcOdbcDriver"); Connection con=DriverManager.getConnection("jdbc:odbc:xyz"); Statement stmt=con.createStatement(); ResultSet rs=stmt.executeUpdate("select * from emp where id=101"); con.close(); } }	4	N	A	2	Error is in query execution statement
168	Analyse the following code and find out errors import java.sql.*; class Record { public static void main(String args[])throws Exception { Class.forName("jdbc:odbc.JdbcOdbcDriver"); Connection con=DriverManager.getConnection("jdbc:odbc:mydsn"); Statement stmt=con.createStatement(); ResultSet rs=stmt.executeQuery("select * from emp where id=101"); System.out.println("EmpName\tDesignation\tSalary"); while(rs.next()) { System.out.println(rs.getString(1)+"\t"+rs.getString(2)+"\t"+rs.getInt(3)); } con.close(); } }	4	N	A	2	Error is in statement in which driver is registered
169	Analyse the following code and find out missing statement. import java.sql.*; class Record { public static void main(String args[])throws Exception { Connection con=DriverManager.getConnection("jdbc:odbc:xyz"); Statement stmt=con.createStatement();	4	N	A	2	Missing driver registration statement

	ResultSet rs=stmt.executeQuery("select * from emp where id=101"); System.out.println("EmpName\tDesignation\tSalary"); while(rs.next()) { System.out.println(rs.getString(2)+"\t"+rs.getString(3)+"\t"+rs.getInt(4)); } con.close(); } }					
170	Analyze the following code: ResultSet resultSet = statement.executeQuery ("select firstName, mi, lastName from Student where lastName " + " = 'Smith'"); System.out.println(resultSet.getString(1));	4	N	U	2	The program will have a runtime error, because the cursor in resultSet is at the first row. You must use resultSet.next() to move the cursor to the first row in the table. Subsequently, resultSet.next() moves the cursor to the next row in the table.
171	Analyze the following code: ResultSet resultSet = statement.executeQuery ("select firstName, mi, lastName from Student where lastName " + " = 'Smith'"); System.out.println(resultSet.getString(1));	4	N	A	2	II, III
172	API is which of the following	4	N	U	2	Middleware that provide access to database.
173	Are Resultsets Updateable?	4	N	A	2	yes, but if the resultSet is an object of class UpdatableResultSet, and if the database support this option
174	boolean execute() method returns	4	N	U	2	Multiple results
175	By using which interface one can store images in the database in java ?	4	N	U	2	PreparedStatement interface
176	Choose missing statements in following code from given options. import java.sql.*; class DBTest { public static void main(String args[]) { try { Class.forName("sun.jdbc.odbc.JdbcOdbcDriver"); System.out.println("Driver Loaded"); String url="jdbc:odbc:xyz"; Connection con=DriverManager.getConnection(url); System.out.println("Connection to database is created"); Statement st=con.createStatement(); System.out.println("Statement Object is created"); catch(SQLException e) { System.out.println("SQL Error"); } catch(Exception e) { System.out.println("Error"); } } }	4	N	A	2	} missing
177	Choose missing statements in following code from given options. Import java.sql.*; Class conn { Public static void main(String args[]) { try { System.out.println("Drivers are properly loaded"); String url="jdbc:odbc:abc"; Connection con=DriverManager.getConnection(url); System.out.println("Connection Established"); con.close(); } catch(SQLException e) { System.out.println("SQL Error has occurred "); } catch(Exception e) { System.out.println("Error! Connection not established"); } } }	4	N	A	2	Class.forName("sun.jdbc.odbc.JdbcOdbcDriver");
178	Choose missing statements in following code from given options. import java.sql.*; class DemoFetch { public static void main(String args[]) { Connection con; Statement stmt; ResultSet rs; String qry, url; try { Class.forName("sun.jdbc.odbc.JdbcOdbcDriver"); url="jdbc:Odbc:studdsn"; con=DriverManager.getConnection(url,"", ""); stmt=con.createStatement(); qry="select * from stud"; rs=_____ System.out.println("Roll No\tName\tPercentage"); while(rs.next()) { int rno=rs.getInt("roll"); String nm=rs.getString("sname"); double per=rs.getDouble("per"); System.out.println(rno+"\t"+nm+"\t"+per); } con.close(); } catch(Exception e){ } }	4	N	A	2	stmt.executeQuery(qry)
179	Choose missing statements in following code from given options. import java.sql.*; class DemoFetch1 { public static void main(String args[]) { Connection con; PreparedStatement pstmt; ResultSet rs; String qry,url; try { Class.forName("sun.jdbc.odbc.JdbcOdbcDriver"); url="jdbc:Odbc:studdsn"; con=DriverManager.getConnection(url,"", ""); qry="select * from stud"; pstmt=con.prepareStatement(qry); rs=_____ System.out.println("Roll No\tName\tPercentage"); while(rs.next()) { int rno=rs.getInt("roll"); String nm=rs.getString("sname"); double per=rs.getDouble("per"); System.out.println(rno+"\t"+nm+"\t"+per); } con.close(); } catch(Exception e) { System.out.println(e.toString()); } }	4	N	A	2	pstmt.executeQuery(qry)
180	Choose missing statements in following code from given options. import java.sql.*; import java.io.*; class DemoPreparedStatement { Connection con; PreparedStatement pstmt; String qry,url; public static void main(String args[]) { try { Class.forName("sun.jdbc.odbc.JdbcOdbcDriver"); url="jdbc:Odbc:studdsn"; con=DriverManager.getConnection(url,"", ""); qry=_____ pstmt=con.prepareStatement(qry); pstmt.clearParameters(); pstmt.setInt(1,11); pstmt.setString(2,"XYZ"); pstmt.setDouble(3,65.77); int res=pstmt.executeUpdate(); if(res>0) System.out.println("Record Inserted..."); else System.out.println("Error..."); con.close();	4	N	A	2	&quot;insert into stud values(?,?,?)&quot;;

	}catch(Exception e){} } }					
181	Choose the correct alternative to update employee table	4	N	A	2	PreparedStatement pstmt = null; try { String SQL = "Update Emp WHERE id = ? "; pstmt = conn. prepareStatement (SQL); ... } catch ... } finally { pstmt. Close (); }
182	Choose the correct output for the given code: import java.sql.*; class Mydatabase1 { public static void main(String args[]) { try { Class.forName("sun.jdbc.odbc.JdbcOdbcDriver"); System.out.println("Driver Loaded"); Connection c=DriverManager.getConnection("jdbc:odbc:MYDSN"," "," "); System.out.println("Connection Established"); Statement st=c.createStatement(); ResultSet rs=st.executeQuery("Select * from StudTable"); while(rs.next()) { System.out.println(rs.getString(1)+" "+rs.getString(2)); } rs.close(); st.close(); c.close(); } catch(Exception e) { System.out.println(e); } } }	4	Y2	A	2	S1Q5401
183	Choose the correct syntax of creating query to read records with salary > 10000	4	N	A	2	select * from employee where salary >10000
184	class Ddemo1 { public static void main(String args[]) throws Exception { Class.forName("sun.jdbc.odbc.JdbcOdbcDriver"); Connection c=DriverManager.getConnection("jdbc:odbc:ODSN"," "," "); Statement s=c.createStatement(); ResultSet rs=s.executeQuery("select *from StudTable"); System.out.println("Name" + " \t " + "Roll_No" + " \t " + "Avg"); while(rs.next()) 26 { System.out.println(rs.getString(1)+" \t "+rs.getInt(2)+" \t "+rs.getDouble(3)); } s.close(); c.close(); } } class Ddemo1 { public static void main(String args[]) throws Exception { Class.forName("sun.jdbc.odbc.JdbcOdbcDriver"); Connection c=DriverManager.getConnection("jdbc:odbc:ODSN"," "," "); Statement s=c.createStatement(); ResultSet rs=s.executeQuery("select *from StudTable"); System.out.println("Name" + " \t " + "Roll_No" + " \t " + "Avg"); while(rs.next()) { System.out.println(rs.getString(1)+" \t "+rs.getInt(2)+" \t "+rs.getDouble(3)); } s.close(); c.close(); }	4	N	A	2	Missing package statement.
185	Connection con = DriverManager.getConnection ("jdbc:odbc:wombat", "login", "password"); Statement stmt = con.createStatement(); ResultSet rs = stmt.executeQuery("SELECT a, b, c FROM Table1"); while (rs.next()) { Integer x = rs.getInt("c"); String s = rs.getString("a"); Float f = rs.getFloat("b"); } What is WRONG with the code above?	4	N	A	2	Retrieval of the fields is in the wrong order.
186	Connection con=DriverManager.getConnection(url); this command will create the following	4	N	A	2	new con object of connection class initiated with connection of content
187	Connection object can be initialized using the ..... method of the Driver Manager class.	4	N	R	2	getConnection()
188	Consider following code and state missing code ? import java.sql.*; class exp2 { public static void main(String args[])throws Exception { try { Class.forName("....."); Connection con=DriverManager.getConnection("Jdbc:Odbc:demo1dsn"); Statement st=con.createStatement(); ResultSet rs=st.executeQuery("select * from Table1"); System.out.println("After insertion of new record"); while(rs.next()) { System.out.println(rs.getString(1)); System.out.println(rs.getString(2)); System.out.println(rs.getString(3)); } st.executeUpdate("insert into Table1 values('jasmine',10,'banglore')"); ResultSet rs1=st.executeQuery("select * from Table1 "); while(rs1.next()) { System.out.println(rs1.getString(1)); System.out.println(rs1.getString(2)); System.out.println(rs1.getString(3)); } } catch(Exception e) {} }	4	N	A	2	sun.jdbc.odbc.JdbcOdbcDriver
189	Consider following code and state which statement is missing in following code ? import java.sql.*; class JDBCDEMO { { Class.forName("sun.jdbc.odbc.JdbcOdbcDriver"); Connection c=DriverManager.getConnection("jdbc:odbc:ODSN"," "," "); ResultSet rs=s.executeQuery("select *from StudTable"); System.out.println("Name" + " \t " + "Roll_No" + " \t " + "Avg"); while(rs.next()) { System.out.println(rs.getString(1)+" \t "+rs.getInt(2)+" \t "+rs.getDouble(3)); } s.close(); c.close(); } }	4	N	A	2	Statement s=c.createStatement();
190	Consider Following Code. Select the statement that should be added to the program to get correct output. import java.sql.*; import java.io.*; public class DeleteRecord3 { public static void main (String args[]) { try { Class.forName("sun.jdbc.odbc.JdbcOdbcDriver"); BufferedReader br=new BufferedReader(new InputStreamReader(System.in)); System.out.print("Enter rollno to delete:"); int rno=Integer.parseInt(br.readLine()); Statement stmt=conn.createStatement(); stmt.executeUpdate("Delete from Stud where rno="+rno);	4	N	A	2	Connection conn=DriverManager.getConnection("jdbc:odbc:mcm&

403	Set XXX() method binds values to the parameters. Where XXX represents	4	N	U	2	Data Type
404	Statement interface is used for _____	4	N	U	2	sending SQL queries to the database
405	Stored procedures have which of the following advantages?	4	N	U	2	Data integrity improves as multiple applications access the same storec
406	<p>Suggest corrections in the following program segment</p> <pre>import java.sql.*; import sun.jdbc.odbc.*; class mydatabase { public static void main(String args[]) { Class.forName("sun.jdbc.odbc.JdbcOdbcDriver"); Connection con = DriverManager.getConnection(); Statement stmt=con.createStatement(); stmt.execute("create table contacts(name varchar(30),mobile varchar(20))"); con.close(); System.out.println("table created..."); } }</pre>	4	N	A	2	public static void main(String args[]) throws SQLException DriverManager.getConnection(&quot;jdbc:odbc:mysdn&quot;);
407	<p>Suppose a prepared statement is created as follows: Statement preparedStatement = connection.prepareStatement("insert into Student (firstName, mi, lastName)" + "values (?, ?, ?)"); To set a value John to the first parameter, use</p>	4	N	U	2	preparedStatement.setString(1, 'John');
408	The CallableStatement interface extends _____ interface	4	N	U	2	PreparedStatement
409	<p>The following example to connect Java Application with access?</p> <pre>import java.sql.*; class Test { public static void main(String ar[]) { try { String url="jdbc:odbc:mysdn"; Class.forName("sun.jdbc.odbc.JdbcOdbcDriver"); Connection c=DriverManager.getConnection(url); Statement st=c.createStatement(); ResultSet rs=st.executeQuery("select * from login"); while(rs.next()) { System.out.println(rs.getString(1)); } }catch(Exception ee){System.out.println(ee);} } }</pre>	4	N	A	2	with DSN
410	The following step is for stmt.executeUpdate(sql); sql = "INSERT INTO Registration " + "VALUES(103, 'Sumit', 'Mittal', 28)"; stmt.executeUpdate(sql);	4	N	A	2	Insert
411	the interface to the database is handle by	4	N	U	2	APIS
412	The JDBC-ODBC bridge allows ----- to be used as -----	4	N	U	2	ODBC drivers,JDBC drivers
413	The JDBC-ODBC Bridge driver is	4	N	U	2	Both A & B

414	The JDBC-ODBC Bridge supports multiple concurrent open statements per connection?	4	N	A	2	one
415	The method - "public DatabaseMetaData getMetaData()" - belongs to the Interface _____	4	N	A	2	Connection interface
416	The methods of Statement interface are	4	N	U	2	All of the above
417	The output of following program is : import java.sql.*; class preparestmt { public static void main(String[] args) { try { Class.forName("sun.jdbc.odbc.JdbcOdbcDriver"); System.out.println("driver loaded"); String url = "jdbc:odbc:TYCM"; Connection con = DriverManager.getConnection(url); System.out.println("connection created"); PreparedStatement prepare=con.prepareStatement("select * from Information where age=15"); ResultSet rs=prepare.executeQuery(); if(rs.next()) { System.out.println("student information is"); System.out.println(rs.getString("name")); System.out.println(rs.getInt("age")); } else System.out.println("No student found"); con.close(); System.out.println("Connection is closed"); } catch (SQLException e) { System.out.println("SQL Exception"); } catch (Exception e) { System.out.println("General Exception"); } }}	4	N	A	2	driver loaded connection created student information is BBB 15 Connec
418	The parameters of the PreparedStatement object are _____when the user clicks on the Query button	4	N	U	2	initialized
419	The ResultSet is used to get information about a.....	4	N	U	2	ResultSet
420	The Statement interface is mainly used to_____	4	N	U	2	To execute queries asked to database
421	The statement _____ changes the Course title to Java Programming for the CourseID 11111.	4	N	U	2	update Course set title = 'Java Programing' where courseId = '11111'
422	The _____ method can be used on a _____ object to create its meta data object	4	N	U	2	getMetaData(),ResultSet
423	The _____ package contains classes that help in connecting to a database, sending SQL statements to the database, and processing the query result	4	N	U	2	java.sql
424	The _____method sets the query parameters of the PreparedStatement Object.	4	N	U	2	setString()
425	The _____object provides you with methods to access data from the table.	4	N	U	2	ResultSet
426	This is an example of prepared statement interface that ? PreparedStatement stmt=con.prepareStatement("select * from emp"); ResultSet rs=stmt.executeQuery(); While(rs.next()){ System.out.println(rs.getInt(1) + " " + rs. getString(2)); }	4	N	A	2	B. retrieve the record
427	This is an example of Statement interface that? import java.sql.*; class PreStat { public static void main(String args[]) throws Exception { Class.forName("sun.jdbc.odbc.JdbcOdbcDriver"); Connection c=DriverManager.getConnection("jdbc:odbc:student"," "," "); Statement s=c.createStatement("select * from studTable"); ResultSet rs=s.executeQuery(); System.out.println("Name" + " \t " + "Roll_No"); while(rs.next()) { System.out.println(rs.getInt(1)+" \t "+rs.getString(2)); } s.close(); c.close(); } }	4	N	A	2	retrieve the record
428	This statement Tells the DB to empty transaction log & bring DB back to the state, before the changes in transaction log were executed	4	N	U	2	rollback()
429	Three-tier Architecture includes which of the following.	4	N	U	2	client layer and two server layers
430	To connect to a local MySQL database named test, use	4	N	U	2	Connection connection = DriverManager.getConnection(&quot;jdbc:mysql://localhost/test&quot;;
431	To delete reord from database table student what modification we have to do in following program. import java.sql.*; public class JdbcDemo1 { public static void main(String args[]) throws Exception { Class.forName("sun.jdbc.odbc.JdbcOdbcDriver"); Connection con = DriverManager.getConnection("jdbc:odbc:mysdsn"); Statement stmt = con.createStatement(); int result=st.executeUpdate("delete student where id=1"); System.out.println(result+" records affected"); con.close(); } }	4	N	A	2	int result=stmt.executeUpdate(&quot;delete from student where id=18
432	To establish connection with database which method of DriverManager class is used?	4	N	U	2	getConnection()

433	To establish the connection with the specified url?	4	N	U	2	public static Connection getConnection(String url)
434	To execute a SELECT statement "select * from Address" on a Statement object stmt, use	4	N	U	2	stmt.executeQuery(&quot;select * from Address&quot;;);
435	To execute a stored procedure "totalStock" in a database server, which of the following code is used?	4	N	U	2	CallableStatement cblstmt = con.prepareCall(&quot;{call totalStock}&quot;;);cs.executeQuery();
436	To execute create query which method is used?	4	N	U	2	execute()
437	To obtain a scrollable or updateable result set, you must first create a statement using the following syntax:	4	N	U	2	Statement statement = connection.createStatement(ResultSet.TYPE_SCROLL_RESULTSET,ResultSet.CONCUR_UPDATABLE);
438	To set the parameters in PreparedStatement which methods are used?	4	N	U	2	both a& b
439	To syntax for creating a table named Course should begin with _____.	4	N	U	2	create table Course (
440	To to get the column names and row data from a table. Select the proper statement from the following AT * _____line import java.sql.*; public class SelDemo { public static void main(String args[]) { try { Class.forName("sun.jdbc.odbc.JdbcOdbcDriver"); Connection con = DriverManager.getConnection("jdbc:odbc: myDSN "); Statement st = con.createStatement(); * _____//(Choose correct option for this line) while(sel.next()) { String name = sel.getString(1); String pass = sel.getString(2); System.out.println(name+" "+pass); } } catch(Exception e) { System.out.println("Errorrrrrr"+e.getMessage()); } } }	4	N	A	2	ResultSet sel = st.executeQuery (&quot;select * from Login&quot;;);
441	try { Class.forName("sun.jdbc.odbc.JdbcOdbcDriver"); Class.forName("oracle.jdbc.driver.OracleDriver"); } catch(ClassNotFoundException cnfe) { System.err.println("Error loading driver: " + cnfe); }	4	N	A	2	Will load two different drivers
442	two-tiers and three-tiers architecture is applicable with the database?	4	N	A	2	YES
443	Valid constant to set ResultSet as Scrollable is _____	4	N	A	2	Both B and C
444	We can use ResultSet navigation methods when we have ResultSet that is of type	4	N	U	2	both b&c
445	What contains object specific to database,and Used to create Connection object from the options ?	4	N	R	2	Driver Interface / Connect()
446	What correction should be done in the program to get corrected output import java.sql.*; import java.io.*; class JdbcP { public static void main(String arg[]) { try { DataInputStream in=new DataInputStream(System.in); Class.forName("sun.jdbc.odbc.JdbcOdbcDriver"); System.out.println("Drivers loaded"); String url="jdbc:odbc:abc"; Connection con=DriverManager.getConnection(url); System.out.println("connection established"); PreparedStatement ps=con.prepareStatement("create table movie6(num Integer,mvnm Varchar(30))"); ps.executeUpdate(); System.out.println("Table Created"); String sql="insert into movie6 VALUES(?,?)"; PreparedStatement ps2=con.prepareStatement(sql); System.out.println("Enter movie code"); int mcd=Integer.parseInt(in.readLine()); ps2.setInt(1,mcd); System.out.println("Enter movie name"); String name=in.readLine(); ps2.setString(2,name); ps2.executeUpdate(); con.close(); } catch(SQLException e) { System.out.println(" sql error"); } catch(Exception e) { System.out.println(" connection error1"); } } }	4	N	A	2	String url=&quot;jdbc:odbc:abc&quot;;
447	What correction should be done in the program to get corrected output import java.sql.*; import java.io.*; class JdbcP { public static void main(String arg[]) { try { DataInputStream in=new DataInputStream(System.in); Class.forName("sun.jdbc.odbc.JdbcOdbcDriver"); System.out.println("Drivers loaded"); String url="jdbc:odbc:abc"; Connection con=DriverManager.getConnection(url); System.out.println("connection established"); ps.executeUpdate(); System.out.println("Table Created"); String sql="insert into movie6 VALUES(?,?)"; PreparedStatement ps2=con.prepareStatement(sql); System.out.println("Enter movie code"); int mcd=Integer.parseInt(in.readLine()); ps2.setInt(1,mcd); System.out.println("Enter movie name"); String name=in.readLine(); ps2.setString(2,name); ps2.executeUpdate(); con.close(); } catch(SQLException e) { System.out.println(" sql error"); } catch(Exception e) { System.out.println(" connection error1"); } } }	4	N	A	2	Missing Statement
448	What does "msbte" indicate in the below code? Class.forName("sun.jdbc.odbc.JdbcOdbcDriver"); Connection	4	N	U	2	Data Source Name

	con=DriverManager.getConnection("jdbc:odbc:msbte");					
449	What does the following code do? smt=con.createStatement();	4	N	A	2	A Statement object is created to send sql commands to the database
450	What happens after execution of following code import java.sql.*; public class JdbcAccessConnectionDemo { public static void main(String [] args) { Connection con = null; try { Class.forName("sun.jdbc.odbc.JdbcOdbcDriver") ; con = DriverManager.getConnection("jdbc:odbc:database1"); System.out.println("Connection OK."); con.close(); } catch (Exception e) { System.err.println("Exception: "+e.getMessage()); } } }	4	N	A	2	Connecction OK.
451	What happens after execution of following code import java.sql.*; import java.io.*; public class new { public static void main(String args[]) { try { Class.forName("sun.jdbc.odbc.JdbcOdbcDriver"); System.out.println("Drivers are loaded properly."); String url = "jdbc:odbc:Demo"; Connection c1 = DriverManager.getConnection(url); String sql="create table emp1(emp_id INTEGER,emp_name varchar(20))"; PreparedStatement ps = c1.prepareStatement(sql); ps.executeUpdate(); c1.close(); }catch(SQLException se) { System.out.println("SQL Error."); }catch(Exception e) { System.out.println("Other Error."); } } }	4	N	A	2	Successfully Run and table is created.
452	What happens if the following code is executed? import java.sql.*; public class S1Q57{ public static void main(String[] args) { Class.forName("sun.jdbc.odbc.JdbcOdbcDriver"); Connection con = DriverManager.getConnection("jdbc:odbc:shree"); Statement stm = con.createStatement(); String query ="select rollno,name,percent from student "; ResultSet rs = stm.executeQuery(query); while(rs.next()){ System.out.println("Roll No = "+rs.getInt(1)); System.out.println("Name = "+rs.getString(2)); System.out.println("per = "+rs.getDouble(3)); } con.close(); } }	4	N	A	2	There is a compiler error
453	What happens if you call deleteRow() on a ResultSet object?	4	N	A	2	The row you are positioned on is deleted form the ResultSet and from t
454	What happens if you call the method close() on a ResultSet object?	4	N	U	2	the database and JDBC resources are released
455	What is correct about DDL statements (create, grant,...)?	4	N	A	2	DDL statements are treated as normal SQL statements, and are execut execute() method on a Statement(or a sub interface thereof) object
456	What is error in following program import java.sql.*; class PreparedStatementDemo { public static void main(String args[]) { try { Class.forName("sun.jdbc.odbc.JdbcOdbcDriver"); Connection con= DriverManager.getConnection("jdbc:odbc:Samarth"); PreparedStatement ps=con.prepareStatement("select * from student"); ResultSet rs=ps.executeQuery(); ResultSetMetaData rs1=con.getMetaData(); System.out.println(rs1.getColumnCount()); } catch(Exception e) { System.out.println(e); } } }	4	N	A	2	error:incompatible types: &quot;ResultSetMetaData rs1=con.getMetaD.
457	What is error in following program? import java.sql.*; class PreparedStatementDemo { public static void main(String args[]) { try { Class.forName("sun.jdbc.odbc.JdbcOdbcDriver"); Connection con= DriverManager.getConnection("jdbc:odbc:Samarth"); PreparedStatement ps=con.prepareStatement("select * from student"); ResultSet rs=ps.executeQuery(); while(rs.next()) { System.out.println(rs.getInt(1)); System.out.println(rs.getString(2)); System.out.println(rs.getString(3)); } } catch(Exception e) { System.out.println(e); } } }	4	N	A	2	java.sql.SQLException: No suitable driver found for jdbc:odbc:Samarth
458	What is error in following program? import java.sql.*; class PreparedStatementDemo { public static void main(String args[]) { try { Class.forName("sun.jdbc.odbc.JdbcOdbcDriver"); Connection con= DriverManager.getConnection("jdbc:odbc:Samarth"); PreparedStatement ps1=con.prepareStatement("update student set Name=? City=? ID=? where ID=?"); ps1.setString(1,"tttt"); ps1.setString(2,"Belhe"); ps1.setInt(3,777); ps1.setInt(4,777); ps1.executeUpdate(); ps1.close(); con.close(); } catch(Exception e) { System.out.println(e); } } }	4	N	A	2	java.sql.SQLException: [Microsoft] [ODBC Microsoft Access Driver] Synta operator) in query expression 'Pa_RaM000 City=Pa_RaM001 ID=Pa_Rai
459	What is error in following program? import java.sql.*; class PreparedStatementDemo { public static void main(String args[]) { try { Class.forName("sun.jdbc.odbc.JdbcOdbcDriver"); Connection con= DriverManager.getConnection("jdbc:odbc:Samarth"); PreparedStatement ps1=con.prepareStatement("update student set Name=?,City=?,ID=? where ID=?"); ps1.setString(1,"tttt"); ps1.setString(2,"Belhe"); ps1.setInt(3,777); ps1.executeUpdate(); ps1.close(); con.close(); } catch(Exception e) { System.out.println(e); } } }	4	N	A	2	java.sql.SQLException: [Microsoft][ODBC Microsoft Access Driver]COUN1
	What is error in following program? import java.sql.*; class Demo3 { public static void					

460	main(String args[]) { try { Class.forName("sun.jdbc.odbc.JdbcOdbcDriver"); Connection con= DriverManager.getConnection("jdbc:odbc:Samarth"); PreparedStatement ps=con.prepareStatement("select * from student"); ResultSet rs=ps.executeQuery(); while(rs.next()) { System.out.println(rs.getInt(1)); System.out.println(rs.getString(2)); System.out.println(rs.getString(3)); } } catch(Exception e) { System.out.println(e); } } }	4	N	A	2	java.lang.ClassNotFoundException: sun.jdbc.odbc.JdbcOdbcDriver
461	What is meaning of following code snippet System.out.println("NAME\tAGE"); String sql = "select Name, Age from StudInfo"; ResultSet results = state.executeQuery(sql);	4	N	A	2	executeQuery() method will execute sql query and output is available is ResultSet class
462	What is missing in the following program? import java.sql.*; public class execute { public static void main(String args[]) { try { String url="jdbc:odbc:abcd"; Connection con=DriverManager.getConnection(url); System.out.println("Connection Established"); String sql="insert into student values(11,'Ramesh')"; Statement st=con.createStatement(); st.executeUpdate(sql); System.out.println("Data Inserted"); con.close(); } catch(SQLException e) { System.out.println("SQL Error Has Occured"); } catch(Exception e) { System.out.println("Error"); } } }	4	N	A	2	to register the driver
463	what is Native Protocol, Pure Java Driver?	4	N	A	2	This type of driver, written entirely in Java, communicates directly with t
464	What is output of following code import java.sql.*; import java.io.*; public class StudentTableInsert { public static void main(String args[]) { BufferedReader br = new BufferedReader(new InputStreamReader(System.in)); String Name; int Age; Class.forName("sun.jdbc.odbc.JdbcOdbcDriver"); System.out.println("Driver Loaded"); String URL = "jdbc:odbc:StudentDatabase"; Connection con = DriverManager.getConnection(URL); System.out.println("Connection to database created."); Statement state = con.createStatement(); System.out.println("Statement Object Created."); } }	4	N	A	2	Driver Loaded Connection to database created Statement Object creat
465	What is output of following program. import java.sql.*; public class jdbc1 { public static void main(String args[]) { try { Class.forName("sun.jdbc.odbc.JdbcOdbcDriver"); Connection con=DriverManager.getConnection("jdbc:odbc:data"); Statement st=con.createStatement(); ResultSet rs=st.executeQuery("select * from student"); while(rs.next()) { System.out.println("id:"+rs.getInt("id")); System.out.println("name:"+rs.getString("name1")); } con.close(); } catch(SQLException e) { } catch(Exception e) { } } }	4	N	A	2	values of id and name will be displayed from table
466	What is the correct sequence of database connectivity	4	N	A	2	My Computer->Control Panel->Administrative Tool->Data Source User DSN->Add DSN
467	What is the disadvantage of Type-4 Native-Protocol Driver?	4	N	A	2	At client side, a separate driver is needed for each database.
468	What is the error in this code import java.sql.*; class ConnectionDemo { public static void main(String args[]) { try { Class.forName("sun.jdbc.odbc.JdbcOdbcDriver"); System.out.println("Driver Loaded....."); String url="jdbc:odbc:abc"; Connection con=DriverManager.getConnection(url); System.out.println("Connection Established...."); System.out.println("Object is Created....."); String sql="create table Raison1(Name char, Age int)"; boolean res=smt.executeUpdate(sql); if(res==true) System.out.println("table is created..."); else System.out.println("Table is not created....."); } catch(SQLException e) { System.out.println("SQL Error..."); } catch(Exception e) { System.out.println("Error is Found..."); } } }	4	N	A	2	Statement not created
469	what is the main components of JDBC ?	4	N	A	2	all of these
470	What is the missing in the following program import java.sql.*; public class connection { public static void main(String args[]) { try { Class.forName("sun.jdbc.odbc.JdbcOdbcDriver"); System.out.println("Drivers are properly loaded"); String url="jdbc:odbc:abcd"; System.out.println("Connection Established"); con.close(); } catch(SQLException e) { System.out.println("SQL Error Has Occured"); } catch(Exception e) { System.out.println("Error"); } } }	4	N	A	2	Connection to database
471	what is the missing statement in following program to access the database using jdbcodbc connection import java.util.*; import java.sql.*; public class JdbcDemo { public static void main(String args[]) { String query = "SELECT Name,Description,Qty,Cost FROM Stock"; try { Class.forName("sun.jdbc.odbc.JdbcOdbcDriver"); Connection con = DriverManager.getConnection ("jdbc:odbc:Inventory"); ResultSet rs = stmt.executeQuery(query); while (rs.next()) { String name = rs.getString("Name"); String desc = rs.getString("Description"); int qty = rs.getInt("Qty"); float cost = rs.getFloat("Cost");	4	N	A	2	Statement stmt = con.createStatement();

	System.out.println(name+" ", "+desc+"\\t: " +qty+"\\t@ \$" +cost); } con.close(); } catch(ClassNotFoundException e){ e.printStackTrace(); } catch(SQLException e){ e.printStackTrace(); } } }					
472	What is the output of following code? Assume suitable data import java.sql.*; class Contest { public static void main(String args[]) { try { Class.forName("sun.jdbc.odbc.JdbcOdbcDriver"); System.out.println("\\n Drivers loaded properly"); String url="jdbc:odbc:abc"; Connection con=DriverManager.getConnection(url); System.out.println("\\n Conncted"); String sql="create table t1(empno Integer,empname varchar(20))"; PreparedStatement ps1=con.prepareStatement(sql); ps1.executeUpdate(); System.out.println("\\n Table created"); con.close(); } catch(SQLException e) System.out.println("\\n SQL Error"); } catch(Exception e) { System.out.println("\\n Other Error"); } }	4	N	A	2	Table created
473	what is the output of following code import java.sql.*; class StudentData { public static void main(String args[]) { try { Class.forName("sun.jdbc.odbc.JdbcOdbcDriver"); Connection con = DriverManager.getConnection("jdbc:odbc:stud"); PreparedStatement ps = con.prepareStatement("select * from Student where Marks > ?"); ps.setInt(1,40); ResultSet rs = ps.executeQuery(); System.out.println("marks"); while(rs.next()) System.out.println(rs.getString(2)); con.close(); } catch(Exception e){ } } }	4	N	A	2	marks>40
474	what is the output of following code import java.sql.*; class cont { public static void main(String args[]){ try { Class.forName("sun.jdbc.odbc.JdbcOdbcDriver"); System.out.println("Drivers are properly loaded"); String url="jdbc:odbc:abc"; Connection con=DriverManager.getConnection(url); System.out.println("Connection to database created"); con.close(); } catch(SQLException e) { System.out.println("SQL Error "); } catch(Exception e) { System.out.println("error"); } } }	4	N	A	2	both b and c
475	what is the output of following code Try{ String sql="update emp set salary=? Where id=?"; PreparedStatement pstmt=con.prepareStatement(sql); } Catch(SQL Exception e) { }	4	N	A	2	update emp by accepting salary and id as a parameter
476	What is the output of following Program import java.sql.*; public class jdbcConn { public static void main(String[] args) throws Exception{ Class.forName("org.apache.derby.jdbc.ClientDriver"); Connection con = DriverManager.getConnection("jdbc:derby://localhost:1527/testDb","name","pass"); Statement stmt = con.createStatement(); String query = "insert into emp values(2,'name1','job')"; String query1 = "insert into emp values(5,'name2','job')"; String query2 = "select * from emp"; ResultSet rs = stmt.executeQuery(query2); int no_of_rows = 0; while (rs.next()) { no_of_rows++; } System.out.println("No. of rows before commit statement = "+ no_of_rows); con.setAutoCommit(false); stmt.executeQuery(query1); stmt.executeQuery(query); con.commit(); rs = stmt.executeQuery(query2); no_of_rows = 0; while (rs.next()) { no_of_rows++; } System.out.println("No. of rows after commit statement = "+ no_of_rows); }	4	N	A	2	No. of rows before commit statement = 1 No. of rows after commit statu
477	What is the output of following program: import java.sql.*; class exp10_5 { public static void main(String m[])throws Exception { Class.forName("sun.jdbc.odbc.JdbcOdbcDriver"); Connection con=DriverManager.getConnection("jdbc:odbc:dsname"); Statement cmd=con.createStatement(); rs=cmd.executeQuery("select * from tabel1"); while(rs.next()) { System.out.println(rs.getInt(1)+" "+rs.getInt(2)+" "+rs.getString(3)); } cmd.close(); con.close(); } }	4	N	A	2	Compile Error
478	What is the purpose of following code? import java.sql.*; class DeleteRecord { public static void main(String args[])throws Exception { Class.forName("sun.jdbc.odbc.JdbcOdbcDriver"); Connection con=DriverManager.getConnection("jdbc:odbc:xyz"); Statement stmt=con.createStatement(); int result=stmt.executeUpdate("delete from emp"); con.close(); } }	4	N	A	2	Deletes all the record from emp
479	What is the purpose of next() method?	4	N	U	2	next ( ) method is used to retain next elements in a series.
480	What is the query used to display all tables names in SQL Server (Query analyzer)?	4	N	A	2	select * from information_schema.tables
481	What is the return value from stmt.executeQuery("insert into T values (100, 'Smith')")	4	N	A	2	Result Set object
482	What is the return value from stmt.executeUpdate("insert into T values (100, 'Smith')")	4	N	A	2	an int value indicating how many rows are effected from the invocation
483	what is the syntax of close() method in conection interface method	4	N	A	2	public void close() throws SQLException

484	<p>What is the type of 'cmd' object in the following program. import java.sql.*; class exp11_4 {</p> <pre> public static void main(String arg[]) { Class.forName("sun.jdbc.odbc.JdbcOdbcDriver"); Connection con=DriverManager.getConnection("jdbc:odbc:dsnname"); String str="select * from emp where ename='ram'"; _____cmd=con._____ (str); ResultSet rs=cmd.executeQuery(); while(rs.next()) { System.out.println(rs.getString(1)+" "+rs.getString(2)); } cmd1.close(); con.close(); } }</pre>	4	N	A	2	PreparedStatement
485	What is the use of Statement interface?	4	N	U	2	Statement interface provides methods to execute queries with database
486	What is, in terms of JDBC, a DataSource?	4	N	U	2	A DataSource is a factory of connections to a physical data source
487	<p>what may be the output of following program import java.sql.*; class exp10_1 { public static</p> <pre> void main(String m[])throws Exception {Class.forName("sun.jdbc.odbc.JdbcOdbcDriver"); Connection con=DriverManager.getConnection("jdbc:odbc:dsnname"); Statement cmd=con.createStatement(); ResultSetrs=cmd.executeQuery("select * from tabel1"); while(rs.next()) { System.out.println(rs.getInt(1)+" "+rs.getInt(2)+" "+rs.getString(3)); } cmd.close(); con.close(); } }</pre>	4	N	A	2	1 123 Mahesh 2 453 Suresh
488	What MySQL property is used to create a surrogate key in MySQL?	4	N	U	2	AUTO_INCREMENT
489	<p>What should be at the place of _____ to get the correct output: import java.sql.*; public</p> <pre> class Updatedbase { public static void main(String args[]) { try { Class.forName("sun.jdbc.odbc.JdbcOdbcDriver"); Connection con=DriverManager.getConnection("jdbc:odbc:data"); Statement st=con._____; ResultSet rs=st.executeQuery("select * from emp"); System.out.println("before change"); while(rs.next()) { System.out.println("id:"+rs.getInt("id")); System.out.println("salary:"+rs.getString("salary")); System.out.println("name:"+rs.getString("name1")); } int k=st.executeUpdate("Update emp set salary=1000 where id=3"); System.out.println("rows affected:"+k); System.out.println("\n\nafter change"); rs=st.executeQuery("select * from emp"); while(rs.next()) { System.out.println("id:"+rs.getInt("id")); System.out.println("salary:"+rs.getString("salary")); System.out.println("name1:"+rs.getString("name1")); } con.close(); } catch(SQLException e) {} catch(Exception e) {} }</pre>	4	N	A	2	createStatement()
490	<p>What should be the correction done in the following program to get correct output? import</p> <pre> java.sql.*; import java.io.*; class InsertDemo { public static void main(String args[]) { int c=0; try { Class.forName("sun.jdbc.odbc.JdbcOdbcDriver"); String myURL="jdbc:odbc:college"; Connection con=DriverManager.getConnection(myURL); Statement st=con.createStatement(); c=st.executeUpdate("insert into emp values(1,4000)") if(c!=0) System.out.println("Record inserted"); else System.out.println("Record NOT inserted"); con.close(); }catch(Exception e){} } }</pre>	4	N	A	2	missing semicolon
491	<p>What should be the correction done in the following program to get correct output? import</p> <pre> java.Sql.*; import java.io.*; class insertDemo { public static void main(String args[]) { int c=0; try { Class.forName("sun.jdbc.odbc.JdbcOdbcDriver"); String myURL="jdbc:odbc:college"; Connection con=DriverManager.getConnection(myURL); Statement st=con.createStatement(); c=st.executeUpdate("insert into emp values(1,4000)"); if(c!=0) System.out.println("Record inserted"); else System.out.println("Record NOT inserted"); con.close(); }catch(Exception e){} } }</pre>	4	N	A	2	import java.SQL.*;
492	<p>What should be the correction done in the program to get correct output? class Ddemo1 {</p> <pre> public static void main(String args[]) throws Exception { Class.forName("sun.jdbc.odbc.JdbcOdbcDriver"); Connection c=DriverManager.getConnection("jdbc:odbc:ODSN", " ", " "); Statement s=c.createStatement(); ResultSet rs=s.executeQuery("select *from StudTable"); System.out.println("Name" + " \t " + "Roll_No" + " \t " + "Avg"); while(rs.next()) 26 { System.out.println(rs.getString(1)+" \t "+rs.getInt(2)+" \t \t "+rs.getDouble(3)); } s.close(); c.close(); } }</pre>	4	N	A	2	Missing package statement.
	<p>What should be the correction done in the program to get correct output? import java.sql.*;</p> <pre> class Ddemo1 { public static void main(String args[]) throws Exception { Class.forName("sun.jdbc.odbc.JdbcOdbcDriver"); Connection</pre>

495	<p>What statement should be modified to get the output as shown in fig. import java.sql.*; class stud1 { public static void main(String ar[])throws Exception { Class.forName("sun.jdbc.odbc.JdbcOdbcDriver"); Connection con=DriverManager.getConnection("jdbc:odbc:studdsn"); Statement s1=con.createStatement(); ResultSet res; System.out.println("Before insertion"); res=s1.executeQuery("select * from student"); while(res.next()) { System.out.println("Name\t"+res.getInt(1)+" Roll_NO\t"+res.getInt(2)+" per\t"+res.getInt(3)); } Statement st=con.createStatement(); st.executeUpdate("insert into student values('Joshi',10,75)"); System.out.println("inserted"); System.out.println("After insertion"); res=s1.executeQuery("select * from student"); while(res.next()) { System.out.println("Name\t"+res.getString(1)+" Roll_NO\t"+res.getInt(2)+" per\t"+res.getInt(3)); } } }</p> <p>Figure:-</p> 	4	Y1	A	2	System.out.println(&quot;Name &quot;+res.getInt(1)+&quot; Roll_NO &quot;+res.getInt(2)+&quot; per &quot;+res.getInt(3)); should be System.out.println(&quot;Name &quot;+res.getString(1)+&quot; Roll_N &quot;+res.getInt(2)+&quot; per &quot;+res.getInt(3));
496	<pre>What the following statement returns? SQLWarning warning = statement.getWarnings(); System.out.println("Message: " + warning.getMessage());</pre>	4	N	U	2	Description about SQL warning
497	<pre>What will be display in output using the following code. import java.sql.*; class Test { public static void main(String[] args) { try{ Class.forName("sun.jdbc.odbc.JdbcOdbcDriver"); Connection con = DriverManager.getConnection("jdbc:odbc:naresh"); System.out.println("connection established"); con.close(); } catch(Exception e){ } } }</pre>	4	N	A	2	connection established
498	<pre>what will be output of given code //Load the database Driver Class.forName("sun.jdbc.odbc.JdbcOdbcDriver"); //Establish connection with the database Connection Con=DriverManager.getConnection("jdbc:odbc:Stud1") //Create the statement object Statement stmt=con.createStatement(); //Formulate the query String sql="delete from StudTable where Name="Abc"; //Execute the query i=stmt.executeUpdate(sql); System.out.println("Record deleted...."+i); con.close();</pre>	4	N	A	2	record will be deleted
499	<pre>What will be output of this program import java.sql.*; public class JDBCExample { public static void main(String[] args) throws Exception { Class.forName("sun.jdbc.odbc.JdbcOdbcDriver"); System.out.println("Connecting to database..."); conn = DriverManager.getConnection(jdbc:odbc:stud"); stmt = conn.createStatement(); String sql = "CREATE TABLE REGISTRATION " + "(id INTEGER not NULL, " + " first VARCHAR(255),"+"last VARCHAR(255)," + " age INTEGER, " + " PRIMARY KEY ( id ))"; stmt.executeUpdate(sql); } }</pre>	4	N	A	2	It will create a table with name registration
	<pre>What will be the out of the following code? import java.awt.*; import java.io.*; public class</pre>					

500	Demo { public static void main(String args[]) { try { Class.forName("sun.jdbc.odbc.JdbcOdbcDriver"); System.out.println("Driver Loaded"); Connection con=DriverManager.getConnection("jdbc:odbc:mybd1"); System.out.println("Connection Establish"); con.close(); System.out.println("Connection close"); } catch(Exception e) { System.out.println("Error"); } } }	4	N	U	2	Error
501	What will be the output for following code? import java.sql.*; class SelectD { public static void main(String a[]) { try { Class.forName("sun.jdbc.odbc.JdbcOdbcDriver"); System.out.println("Driver Loaded"); String url="jdbc:odbc:if"; Connection con=DriverManager.getConnection(url); System.out.println(" Connection to DataBase created"); Statement stmt =con.createStatement(); String query ="select * from student where stud_marks>70"; ResultSet rs =stmt.executeQuery(query); while(rs.next()) { System.out.println(" Roll number : "+ rs.getInt(1)); System.out.println(" Student name : "+ rs.getString(2)); System.out.println(" Percentage : "+ rs.getInt(3)); System.out.println(); } } catch(ClassNotFoundException e) { e.printStackTrace(); } catch(SQLException e) { e.printStackTrace(); } } }	4	N	A	2	Display student' roll number, student name and percentage those havi greater than 70.
502	What will be the Output of following code? import java.sql.*; public class SmtInterfaceDemo { public static void main(String args[]) { try{ Class.forName("sun.jdbc.odbc.JdbcOdbcDriver"); Connection con=DriverManager.getConnection("jdbc:odbc:db"); System.out.println("Connection established....."); Statement smt=con.createStatement(); System.out.println("Statement Created....."); String sql="create table t2(Name char,Age int); boolean result=smt.execute(sql); if(result==true) { System.out.println("Table Created....."); } else { System.out.println("Table not Created....."); } con.close(); } catch(ClassNotFoundException e) { e.printStackTrace(); } catch(SQLException se) { se.printStackTrace(); } } }	4	N	U	2	Table is created with two data field in database
503	What will be the output of following code? import java.sql.*; public class JdbcGetConnection { public static void main(String args[]) { Connection con = null; Statement st = null; ResultSet rs = null; try { Class.forName("com.mysql.jdbc.Driver"); con = DriverManager.getConnection( "jdbc:mysql://localhost:3306/komal", "root", "root"); System.out.println("Connection is closed : " + con.isClosed()); con.close(); System.out.println("Connection is closed : " + con.isClosed()); } catch (Exception e) { System.out.println(e); } } }	4	N	A	2	Connection is closed : false Connection is closed : true
504	What will be the output of following program? import java.sql.*; class DBTest { public static void main(String args[]) { try { Class.forName("sun.jdbc.odbc.JdbcOdbcDriver"); System.out.println("Driver Loaded"); String url="jdbc:odbc:xyz"; Connection con=DriverManager.getConnection(url); System.out.println("Connection to database is created"); Statement st=con.createStatement(); System.out.println("Statement Object is created"); } catch(SQLException e) { System.out.println("SQL Error"); } catch(Exception e) { System.out.println("Error"); } } }	4	N	A	2	Driver Loaded Connection to database created Statement Object is cre
505	What will be the output of following program? import java.sql.*; class conn1 { public static void main(String h[]) { try { Class.forName("sun.jdbc.odbc.JdbcOdbcDriver"); System.out.println("Driver are properly loaded"); String url="jdbc:odbc:xyz"; Connection con=DriverManager.getConnection(url); System.out.println("connection established"); Statement state=con.createStatement(); String sql="create table stuI4(Name char,Age int); boolean res=state.execute(sql); if(res==0) System.out.println("table not created"); else System.out.println("table created"); } catch(SQLException e) { System.out.println("Sql error has occurred"); } } }	4	N	A	2	Driver are properly loaded connection established and table created
506	WHAT WILL BE THE OUTPUT OF THE BELOW PROGRAM: import java.sql.*; class ConnectionTest { public static void main(String args[]) { try { Class.forName("sun.jdbc.odbc.JdbcOdbcDriver"); System.out.println("Driver loaded"); String url="jdbc:odbc:xyz"; Connection con = DriverManager.getConnection(url); System.out.println("connection to database created"); } catch(SQLException e) { System.out.println("SQL error"); } catch(Exception e) { System.out.println("error"); } } }	4	N	A	2	BOTH Option i and Option ii
507	What will be the result of executing the following code snippet? Statement sql2 = con.createStatement(); int result=sql2.executeUpdate("Select * From Publishers");	4	N	A	2	Will result in compilation error
508	What will happen if resultSet() is not present in JDBC?	4	N	A	2	None of the above

509	What will happen if we does not use the close() method?	4	N	A	2	Connection will does not close
510	What will the following statement display? select Student.* from Student, Course, Enrollment where Student.ssn = Enrollment.ssn and Enrollment.courseId and Course.title = 'Java Programming' and Student.lastName like 'S%';	4	N	A	2	The statement displays all students taking the Java Programming cours starting with S.
511	When a connection is created, by default it is in _____	4	N	U	2	auto commit mode
512	When the message "No suitable drivers found" is displayed?	4	N	U	2	if JDBC database URL passed is not constructed properly.
513	When using ODBC, which of the following processes ODBC requests and submits specific SQL statements to a given type of data source?	4	N	A	2	Driver.
514	Where is Metadata stored in MYSQL?	4	N	U	2	In MYSQL database Mysql
515	Where to write query to delete records in the following program import java.sql.*; public class DeleteRecords { public static void main(String args[]) { String s1; int cnt=0; try { Class.forName("sun.jdbc.odbc.JdbcOdbcDriver"); System.out.println("Drivers are properly loaded"); String url="jdbc:odbc:abcd"; Connection con=DriverManager.getConnection(url); System.out.println("Connection Established"); Statement st=con.createStatement(); st.executeUpdate(); con.close(); } catch(SQLException e) { System.out.println("SQL Error Has Occured"); } catch(Exception e) { System.out.println("Error"); } } }	4	N	A	2	As a parameter to ExecuteUpdate Query
516	Which are the statements related to retrieving table names from a database?	4	N	A	2	... Connection con = .... ; DatabaseMetaData dbmd = con.getMetaData( null; String schema = null; String table = "sys%"; String[ ] types = null; dbmd.getTables(catalog , schema , table , types ); ...
517	Which class has traditionally been the backbone of the JDBC architecure ?	4	N	U	2	A.the JDBC driver manager
518	Which interface allows storing results of query.F39	4	N	U	2	ResultSet
519	which are Exception generated following code import java.sql.*; class Test { public static void main(String[] args) { Class.forName("sun.jdbc.odbc.JdbcOdbcDriver"); String url="jdbc:odbc:xyz"; Connection con = DriverManager.getConnection(url); Statement s = con.createStatement(); s.execute("create table TEST12345 ( firstcolumn integer )"); s.execute("insert into TEST12345 values(1)"); s.execute("select firstcolumn from TEST12345"); ResultSet rs = s.getResultSet(); if (rs != null) while ( rs.next() ) { System.out.println("Data from column_name: " + rs.getString(1) ); } s.close(); con.close(); } }	4	N	A	2	ClassNotFoundException, SQLException
520	Which are methods belongs to DataBaseMetaData?	4	N	U	2	getUserName(). ,isReadOnly()
521	which are the methods are used for Connection interface	4	N	U	2	All of the above
522	Which class not comes under java.sql package	4	N	A	2	Class
523	Which class will use to create the ps object in the given code? import java.sql.*; public class create { public static void main(String a[]) { try { Class.forName("sun.jdbc.odbc.JdbcOdbcDriver"); System.out.println("Driver Loaded"); String url="jdbc:odbc:mydsn"; Connection con=DriverManager.getConnection(url); System.out.println(" Connection to DataBase created"); Statement stmt=con.createStatement(); String query = "create table employee1(emp_id int,emp_name char)"; _____ ps = con.prepareStatement(query); ps.executeUpdate() System.out.println("table created"); ps.close(); con.close(); } catch(SQLException e) { e.printStackTrace(); } catch(Exception e) { e.printStackTrace(); } } }	4	N	A	2	PreparedStatement
524	Which code is correct to generate the given output? Figure:-	4	Y1	A	2	a) PreparedStatement p=c.prepareStatement(&quot;Select * from Emp Name='Ram'&quot;;);

						
525	Which code segment could execute the stored procedure "countRecs()" located in a database server?	4	N	U	2	CallableStatement cs = con.prepareCall(&quot;{call COUNTRECS}&quot;); cs.executeQuery();
526	Which driver is called as thin-driver in JDBC	4	N	A	2	Type-4
527	Which driver is efficient and always preferable to use in JDBC applications?	4	N	U	2	Type 4
528	Which interface provides methods to execute queries with the database?	4	N	U	2	Statement interface
529	which interfaces provide methods for batch processing in JDBC	4	N	U	2	Both A & B
530	Which is a correct coponent of JDBC API	4	N	U	2	both a & b
531	Which is not a Navigation method of ResultSet interface	4	N	U	2	beforeLast()
532	which is the correct discription of the close() method	4	N	A	2	closes the current stmt object
533	Which is the correct method for updating table rows from given option. <pre>import java.sql.*; public class Updatedbase { public static void main(String args[]) { try { Class.forName("sun.jdbc.odbc.JdbcOdbcDriver"); Connection con=DriverManager.getConnection("jdbc:odbc:data"); Statement st=con.createStatement(); ResultSet rs=st.executeQuery("select * from emp"); St.*****("Update emp set name1='jack' where id=2"); System.out.println("\n\nafter change"); rs=st.executeQuery("select * from emp"); while(rs.next()) { System.out.println("id:"+rs.getInt("id")); System.out.println("salary:"+rs.getString("salary")); } con.close(); } catch(SQLException e){} catch(Exception e) { } } }</pre>	4	N	A	2	executeUpdate()
534	Which is the correct option form the following for JDBC driver types?	4	N	U	2	1 JDBC-ODBC bridge plus ODBC driver, also called Type 1. 2 Native-API, also called Type 2. 3 JDBC-Net, pure Java driver, also called Type 3. 4 N Java driver, also called Type 4.
535	Which JDBC driver maps the JDBC calls to the native method calls, which are passed to the local native Call Level Interface (CLI)?	4	N	U	2	Native-API-Partly-Java driver
536	Which JDBC driver Type(s) can be used in either applet or servlet code?	4	N	A	2	Both Type 3 and Type 4
537	Which JDBC driver Type(s) can you use in a three-tier architecture and if the Web server and the DBMS are running on the same machine?	4	N	A	2	All of Type 1, Type 2, Type 3 and Type 4
538	Which JDBC driver Type(s) is (are) the JDBC-ODBC bridge?	4	N	U	2	Type-1
539	Which JDBC driver Types are for use over communications networks?	4	N	A	2	Both Type 3 and Type 4
540	Which kind of driver converts JDBC calls into calls on the client API for Oracle, Sybase, Informix, IBM DB2, or other DBMS?	4	N	U	2	B. Native -API partly-java driver
541	Which list gives a quick way to determine which Connection method is appropriate for creating different types of SQL statements?	4	N	U	2	D.All of the mentioned above
542	Which maintains a cursor pointing to a particular row of data,Initially, cursor points to before the first row?	4	N	U	2	ResultSet interface
543	Which method executes an sql statement that may return multiple results.	4	N	U	2	execute()
544	Which method is incorrect to execute sql query	4	N	U	2	executeUpdate(&quot;select * from MSBTE&quot;);

545	Which method is missing of statement Interface to create table? import java.sql.*; public class createtable { public static void main(String args[]) { try { Class.forName("sun.jdbc.odbc.JdbcOdbcDriver"); System.out.println("Drivers are properly loaded"); String url="jdbc:odbc:abcd"; Connection con=DriverManager.getConnection(url); System.out.println("Connection Established"); String sql="create table employee(emp_id int,emp_name char)"; PreparedStatement ps=con.prepareStatement(sql); System.out.println("table created"); ps.close(); con.close(); } catch(SQLException e) { System.out.println("SQL Error Has Occured"); } catch(Exception e) { System.out.println("Erroe"); } } }	4	N	A	2	execute()
546	Which method returns the current result in multiple result statements?	4	N	A	2	getUpdateCount()
547	Which minimum package statements are missing? class conn { conn() { try { Class.forName("sun.jdbc.odbc.JdbcOdbcDriver"); Connection con=DriverManager.getConnection("jdbc:odbc:samarth"); PreparedStatement ps=con.prepareStatement("Select * from Book"); ResultSet rs=ps.executeQuery(); while(rs.next()) { System.out.println("ID="+rs.getInt(1)); System.out.println("Name="+rs.getString(2)); System.out.println("Author="+rs.getString(3)); } } catch(Exception e) { System.out.println(e); } } public static void main(String args[]) { new conn(); } }	4	N	U	2	java.sql.*;
548	Which object provides DatabaseMetaData object?	4	N	U	2	Connection
549	Which object provides ResultSetMetaData object?	4	N	U	2	ResultSet
550	Which object provides you with methods to access data from the table?	4	N	U	2	ResultSet
551	Which of the following statement is a prepared statements ?	4	N	A	2	Insert into department values(?,?,?)
552	Which of the following are the methods of statement interface?	4	N	A	2	Both A & B
553	Which of the following describes the correct sequence of the steps involved in making a connection with a database. 1. Loading the driver 2. Process the results. 3. Making the connection with the database. 4. Executing the SQL statements.	4	N	A	2	1,3,4,2
554	Which of the following describes the correct url String format of getConnection() method.	4	N	U	2	protocol,subprotocol,datasource name
555	Which of the following invokes stored procedures in sql?	4	N	U	2	callable statements
556	Which of the following is correct sequence of steps regarding to establish the connection with database. 1. Creating connection 2. Closing connection 3. Executing queries 4. Creating statement	4	N	U	2	1,4,3,2
557	which of the following is not true for Statement and PreparedStatment?	4	N	U	2	None of above
558	Which of the following is the correct syntax of executeQuery() method?	4	N	U	2	ResultSet executeQuery(String str)
559	Which of the following is true	4	N	A	2	The two tiers are often called as Application layer includes JDBC drivers user interfaces whereas second layer.
560	Which of the following is used to access the database server at time of executing the program and get the data from the server accordingly ?	4	N	U	2	Dynamic SQL
561	Which of the following method is supported by Statement interface?	4	N	U	2	All of the mentioned
562	Which of the following method is used to open the connection with the database	4	N	U	2	Connection con = DriverManager. getConnection ("jdbc:odbc:somedb",
563	Which of the following piece of code shows how to retrieve the value of the Row Id for a particular Row?	4	N	U	2	String selectQuery = &quot; select rowid from Employees where id =12 resultSet = statement.executeQuery(&quot;selectQuery&quot;); java.s resultSet.getRowId();
564	Which of the following query is correct to fetch all thye records from database. Import java. Sql.*; class MysqlCon{ public static void main (String args[]){ try { Class.forName ("com.mysql.jdbc. Driver"); Connection con = DriverManager. getConnection ("jdbc:mysql://localhost:3306/abc","root","root"); Statement stmt = stmt = con. createStatement(); ResultSet rs = _____ while (	4	N	A	2	C. Stmt.executeQuery(&quot;select* from emp&quot;);

	<pre>rs.next()) System.out.println(rs.getInt(1)+ " " + rs.getString(2) + "" + rs.getString(3)); con.close(); } catch (Exception e) { System.out.println(e);} } }</pre>					
565	Which of the following query is used for SELECT query?	4	N	U	2	executeQuery(String sql)
566	Which of the following statement is false as far as different type of statements is concern in JDBC.	4	N	U	2	D)Interim Statement
567	Which of the following statement is false as Type 4 driver is concern:	4	N	U	2	Type 4 drivers can not be used with NetScape.
568	which of the following statement is true in case security consideration for JDBC. A)normal unsigned applets are generally untrustworthy. B) Downloaded driver should be used for connection purpose only. C)No automatic or implicit use of local credentials while connecting to remote database servers. D)Untrusted applets should not be permitted to access to local database data.	4	N	A	2	all of the above
569	which of the following statement is used to scroll database forward and backward	4	N	A	2	Statement si=con.createStatement(ResultSet.TYPE_SCROLL_SENSITIVE
570	Which of the following statement should be inserted to display contents of last record and where that statement should be inserted 1.import java.sql.*; 2.public class JDBCExample { 3. public static void main(String[] args) { 4. Connection conn = null; 5. Statement stmt = null; 6. Class.forName("sun.jdbc.odbc.JdbcOdbcDriver"); 7. System.out.println("Connecting to database..."); 8.conn = DriverManager.getConnection(jdbc:odbc:stud"); 9.System.out.println("Creating table in given database..."); 10.System.out.println("Creating statement..."); 11. stmt = conn.createStatement(ResultSet.TYPE_SCROLL_INSENSITIVE,ResultSet.CONCUR_READ_ONLY); 12.String sql = "SELECT id, age FROM Registration"; 13. ResultSet rs = stmt.executeQuery(sql); 14. int id = rs.getInt("id"); 15. int age = rs.getInt("age"); 16. System.out.print("ID: " + id); 17. System.out.print(", Age: " + age); } 18. rs.close(); 19. System.out.println("Goodbye!");} }	4	N	A	2	After line no 13 rs.last()
571	Which of the following statements are true about Two tier client server model. a)it is simple in design b)client side scripting uploads work onto the client. c) It is scalebale.	4	N	U	2	a and b
572	Which of the following statements are true?	4	N	U	2	A AND C
573	Which of the following statements is a true statement concerning the open database connectivity standard (ODBC)?	4	N	U	2	All of the above.
574	Which of the following statements is true concerning JDBC?	4	N	U	2	It is similar concept to ODBC.
575	Which of the following method is used for sending SQL statements	4	N	U	2	Statement
576	Which of the missing code need to be inserted in a given code to delete second row in ResultSet. import java.sql.*; import java.sql.ResultSet.*; class delrset {public static void main(String args[]) { try {Class.forName("sun.jdbc.odbc.JdbcOdbcDriver"); Connection con =DriverManager.getConnection("jdbc:odbc:stud"); Statement s = con.createStatement(ResultSet.TYPE_SCROLL_SENSITIVE,ResultSet.CONCUR_UPDATABLE); ResultSet rs=s.executeQuery("select * from stud"); while(rs.next()) System.out.println(rs.getInt(1)+" "+rs.getString(2)+" "+rs.getInt(3)); System.out.println("After deleting row:"); rs.first(); System.out.println(rs.getInt(1)+" "+rs.getString(2)+" "+rs.getInt(3)); while(rs.next()) { System.out.println(rs.getInt(1)+" "+rs.getString(2)+" "+rs.getInt(3)); } con.close(); } catch(Exception e){ } } }	4	N	A	2	rs.absolute(2); rs.deleteRow();
577	Which ONE of the following is missing statement in the program below? import java.sql.*; class ExecuteQueryTest { public static void main(String args[]) { try { Class.forName("sun.jdbc.odbc.JdbcOdbcDriver"); System.out.println("Driver loaded"); String url="jdbc:odbc:aditya"; Connection con = DriverManager.getConnection(url); System.out.println("connection to database created"); Statement st = con.createStatement(); System.out.println("Statement object created"); String sql="select Name,Age from tanni"; ResultSet results = state.executeQuery(sql); String text=" "; while() { text +=results.getString(1)+ "" +results .getInt (2)+ '\n'; } System.out.println(text); } catch(SQLException e) { System.out.println("SQL error"); } catch(Exception e) { System.out.println("error"); } } }	4	N	A	2	results.next()

578	Which one of the following methods is used to execute INSERT, UPDATE, and DELETE statements in a Java application?	4	N	U	2	executeUpdate()
579	Which statement create an error import java.sql.*; class data { public static void main(String a[]) throws Exception { Driver d= new Driver(); DriverManager.registerDriver(d); Connection con =DriverManager.getConnection("Jdbc:Odbc:XXX"); Statement s=con.createStatement(); } }	4	N	A	2	while creating Driver object
580	Which statement is correct after firing delete statement of SQL? import java.sql.*; class Deleted { public static void main(String a[]) { try { Class.forName("sun.jdbc.odbc.JdbcOdbcDriver"); System.out.println("Driver Loaded"); String url="jdbc:odbc:if"; Connection con=DriverManager.getConnection(url); System.out.println("Connection to DataBase created"); Statement stmt = con.createStatement(); String querySel = "Select * from student"; ResultSet rs = stmt.executeQuery(querySel); System.out.println("Before Delete"); while(rs.next()) { System.out.println(" Roll number : "+ rs.getInt(1)); System.out.println(" Student Name : "+ rs.getString(2)); System.out.println(" Student Marks : "+ rs.getInt(3)); System.out.println(); } String querydel = "delete from student where stud_name='Sanjay'"; _____ rs = stmt.executeQuery(querySel); System.out.println("After Delete"); while(rs.next()) { System.out.println(" Roll no : "+ rs.getInt(1)); System.out.println(" Student Name : "+ rs.getString(2)); System.out.println(" Student marks : "+ rs.getInt(3)); System.out.println(); } } catch(SQLException e) { e.printStackTrace(); } catch(Exception e) { e.printStackTrace(); } }	4	N	A	2	stmt.executeUpdate(querydel);
581	Which statement is correct in case of Type 1 JDBC driver a) Type I driver is slow driver. b)Type I Driver is not portable ,because it is a database indepedent but platform depedent. c)Type Driver is not suitable for real time application	4	N	U	2	all of above
582	Which Statement is given the error in the following code import java.sql.*; class dataI { public static void main(String a[]) { try { Driver d= new sun.jdbc.odbc.JdbcOdbcDriver(); DriverManager.registerDriver(d); Connection con =DriverManager.getConnection("Jdbc:Odbc:xxx"); Statement s=con.createStatement(); s.executeUpdate("Insert into Table1 values('hhh',12)"); if(n==1) { System.out.println("Record inserted "); con.close(); } } catch(Exception e) { System.out.println("not Inserted"+e); } } }	4	N	A	2	Sql Query Statement and variable 'if' statement
583	Which statement is static and synchronized in JDBC API?	4	N	U	2	getConnection()
584	Which Statement is used to execute Dynamic Query	4	N	U	2	PreparedStatement
585	Which statement required for getting proper output import java.sql.*; public class updatevalues1 { public static void main(String args[]) { try { Class.forName("sun.jdbc.odbc.JdbcOdbcDriver"); Connection con=DriverManager.getConnection("jdbc:odbc:db"); String sql="update StudTable set Name=? where Rollno=2"; String Name="Ram"; PreparedStatement ps=con.prepareStatement(sql); ps.setString(1,Name); ----- ; System.out.println("Record Updated....."); con.close(); } catch(ClassNotFoundException e) { e.printStackTrace(); } catch(SQLException se) { se.printStackTrace(); } } }	4	N	A	2	ps.executeUpdate()
586	Which statement should be correct for displaying the correct out put? import javax.swing.*; import java.io.*; class dataM { public static void main(String a[]) { String type[]= {"TABLE","View"}; try { Class.forName("sun.jdbc.odbc.JdbcOdbcDriver"); Connection con =DriverManager.getConnection("Jdbc:Odbc:xxx"); Statement s=con.createStatement(); DatabaseMetaData md=rs.getMetaData(); System.out.println("Database is:"+md.getDatabaseProductName()); System.out.println("SQL Keywords is:"+md.getSQLKeywords()); ResultSet rs=md.getTables(null,null,null,types); While(rs.next()) { String to=rs.getString(2); String tn=rs.getString(3); String tt=rs.getString(4); System.out.println(to+" "+tn+" " +tt+" "); } con.close(); } catch() { System.out.println(e); } }	4	N	A	2	Import Package and catch() Statement
587	Which statements about JDBC are true?	4	N	A	2	JDBC stands for Java DataBase Connectivity
588	Which statements are needed to establish connection to database?	4	N	A	2	Class.forName("&quot;sun.jdbc.odbc.JdbcOdbcDriver&quot;"); Connection c=DriverManager.getConnection("&quot;jdbc:odbc:ODSN&quot;",&quot; ;&quot;);

589	<p>Which statements are required in following program to insert one record in table import java.sql.*; public class JDBCExample { public static void main(String[] args) { Connection conn = null; Statement stmt = null; Class.forName("sun.jdbc.odbc.JdbcOdbcDriver"); System.out.println("Connecting to database..."); conn = DriverManager.getConnection(jdbc:odbc:stud"); System.out.println("Inserting records into the table..."); stmt = conn.createStatement();</p> <hr/> <p>System.out.println("Inserted records into the table..."); System.out.println("Goodbye!"); } }</p>	4	N	A	2	String sql = "&quot;INSERT INTO Registration &quot;+&quot;VALUES (1018)&quot;; stmt.executeUpdate(sql);
590	<p>Which statements are used to display the contents of table? import java.sql.*; public class jdbcResultSet { public static void main(String[] args) { try { Class.forName("sun.jdbc.odbc.jdbcodbcDriver"); } catch(ClassNotFoundException e) { System.out.println("Class not found "+ e); } try { Connection con = DriverManager.getConnection ("jdbc:derby://localhost:1527/testDb","username", "password"); Statement stmt = con.createStatement(); ResultSet rs = stmt.executeQuery ("SELECT * FROM employee"); System.out.println("id name job"); while (rs.next()) { int id = rs.getInt("id"); String name = rs.getString("name"); String job = rs.getString("job"); System.out.println(id+" "+name+" "+job); } } catch(SQLException e){ System.out.println("SQL exception occured" + e); } } }</p>	4	N	A	2	getString,getInt methods
591	<p>Which statements are wrong in bellow program import java.sql.*; class stud5 { public static void main(String ar[])throws Exception { Class.forName("jdbc:odbc:studdsn"); Connection con=DriverManager.getConnection("sun.jdbc.odbc.JdbcOdbcDriver"); Statement s1=con.createStatement(); ResultSet res; System.out.println("Before insertion"); res=s1.executeQuery("select * from student"); while(res.next()) { System.out.println("Name\t"+res.getString(1)+" Roll_NO\t"+res.getInt(2)+" per\t"+res.getInt(3)); } PreparedStatement st=con.prepareStatement("insert into student values(?,?,?) "); st.setString(1,"Sayali"); st.setInt(2,45); st.setInt(3,70); st.executeUpdate(); st.setString(1,"Katta"); st.setInt(2,43); st.setInt(3,70); st.executeUpdate(); System.out.println("After insertion"); res=s1.executeQuery("select * from student"); while(res.next()) { System.out.println("Name\t"+res.getString(1)+" Roll_NO\t"+res.getInt(2)+" per\t"+res.getInt(3)); } } }</p>	4	N	A	2	Class.forName("&quot;jdbc:odbc:studdsn&quot;"); Connection con=DriverManager.getConnection("&quot;sun.jdbc.odbc.JdbcOdbcDrive
592	Which type of driver converts JDBC calls into the network protocol used by the database management system directly?	4	N	U	2	Type 4 driver
593	Which type of Statement can execute parameterized queries?	4	N	U	2	PreparedStatement
594	while(rs.next()) { String n=rs.getString("name"); System.out.println("name:"+n); String n1=rs.getString("rollnumber"); System.out.println("rollnumber:"+n1); } What does the above code do?	4	N	A	2	D. none of the above
595	Write a java code to access id, age, first from table given below Employees :   id   first   last   age	4	N	A	2	A. sql = "&quot;SELECT id, age, first FROM Employees&quot;; ResultSet rs=stmt.executeQuery (sql); while (rs.next()) { int id = rs. getInt("&quot;id&quot;")&int rs. getInt (&quot;age&quot;); String first= rs.getString (&quot;first&quot;);
596	Write the missing statement? import java.sql.*; class Rsmd{ public static void main(String args[]){ try{ Class.forName("oracle.jdbc.driver.OracleDriver"); Connection con=DriverManager.getConnection( "jdbc:oracle:thin:@localhost:1521:xe", "system", "oracle"); PreparedStatement ps=con.prepareStatement("select * from emp"); ResultSet rs=ps.executeQuery(); ----- System.out.println("Total columns: " +rsmd.getColumnCount()); System.out.println("Column Name of 1st column: "+rsmd.getColumn(1)); System.out.println("Column Type Name of 1st column: "+rsmd.getColumnType(1)); con.close(); } catch(Exception e){ System.out.println(e); } }	4	N	A	2	ResultSetMetaData rsmd=rs.getMetaData();
597	Write the missing statements? import java.sql.*; class InsertPrepared{ public static void main(String args[]){ try{ Class.forName("oracle.jdbc.driver.OracleDriver"); Connection con=DriverManager.getConnection("jdbc:oracle:thin:@localhost:1521:xe", "system", "oracle"); PreparedStatement stmt=con.prepareStatement("insert into Emp values(?,?,?)"); stmt.setInt(1,101); stmt.setString(2,"Ratan"); int i=stmt.executeUpdate();	4	N	A	2	con.close();

	System.out.println(i+" records inserted"); ----- }catch(Exception e){ System.out.println(e);} } }					
598	Write which method is used for following program execution in blank space: import java.sql.*; class exp11_1 { public static void main(String arg[]) { Class.forName("sun.jdbc.odbc.JdbcOdbcDriver"); Connection con=DriverManager.getConnection("jdbc:odbc:dsnname"); PreparedStatement cmd=con.prepareStatement("select * from emp"); ResultSet rs= cmd._____; while(rs.next()) { System.out.println(rs.getInt(1)+" "+ rs.getString(2) rs.getString(3)+" "+rs.getInt(4)); } cmd.close(); con.close(); } }	4	N	A	2	executeQuery()
599	____ type of driver is very flexible and need not code installation on the client machine	4	N	U	2	Type 3-JDBC-Net Pure java
600	_____moves the cursor to the specified row	4	N	A	2	public boolean absolute(int row)
601	_____ is an open source DBMS product that runs on UNIX, Linux and Windows.	4	N	U	2	MySQL
602	_____ is the key to_____ with respected to RDBMS?	4	N	U	2	Serialization,persistence
603	_____ Calls get converted into native c or c++ API calls	4	N	A	2	JDBC API
604	_____ interface allows stroing results of query?	4	N	R	2	ResultSet
605	_____ method of Connection interface is used to create the Statement object.	4	N	U	2	createStatement()
606	_____ method of DriverManager is used to establish connection with the database.	4	N	U	2	getConnection()
607	_____ Returns the current row number, with the first row starting at 1	4	N	U	2	getRow()
608	_____Returns a ResultSetMetaData object describing the ResultSet.	4	N	U	2	getMetaData
609	..... can not directly communicate with database to submit data & retrive the result.	4	N	U	2	JDBC
610	Which of the following statements loads the JDBC-ODBC driver?	4	N	U	2	Class.forName("&quot;sun.jdbc.odbc.JdbcOdbcDriver&quot;);
